The present sequence is the coding sequence of a synthetic HIV Gag-reverse transcriptase expression cassette, FS(-)_ProtMod_RTopt(+). The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-enry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

SS.

polypeptide useful for vaccinating against HIV acquired immunodeficiency syndrome (AIDS) -Gag-containing infections and

Claim 7; Fig 74; 391pp; English.

Gag-reverse transcriptase expression cassette, FS(-)_Protbod_Rropt_YMWM. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-pollypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS). present sequence is the coding sequence of a synthetic HIV

Sequence 2300 BP; 528 A; 754 C; 725 G; 293 T; 0 other;

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef: Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449 ABK91624 represent modified HIV protein-encoding

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-encoding

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for penetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired in munodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef: Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ARK91624 represent modified HIV protein-encoding plasmid DNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3205

The invention relates to a nucleic acid molecule encoding a modified HIV

English,

Disclosure; Page 750-753; 794pp;

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env, Gag, Pol or Nef) are useful for protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquires in particular immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env, Gag, Pol or Nef. Furthermoze, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-encoding plasmid DNA sequences of the invention.

                encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for appropriate or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-encoding
(human immunodeficiency virus) protein. The nucleic acid molecule and its

```

```
(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env, Gag, Pol or Nef) are useful for appearation or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env, Compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91674 represent modified HIV protein-encoding plasmid DNA sequences of the invention.

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK9149-ABK91624 represent modified HIV protein-encoding

(human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV BrV, Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV BrV, Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91634 represent modified HIV protein-encoding plasmid DNA sequences of the invention.

Sequence 9170 BP; 2225 A; 2669 C; 2519 G; 1757 T; 0 other;
